SCARSDALE The homeowners have three young children and before renovating a large portion of the first floor had no mudroom to speak of. To ensure the mudroom had ease of access, the designer relocated the house's side entrance. The design team chose durable, porcelain floor tiles and added a luxurious electric heat mat underneath. A wall-to-wall built-in was designed to provide individual storage for each family member. There are also two closets, ample hooks, shelves with baskets for smaller items, and a countertop that is the perfect place to catch a purse, keys, and mail.

RYE This traditional mudroom has classic lines, thanks to its trim details and bluestone floor, but it also features modern touches, including the black hardware and pendant light. The mudroom serves as a secondary entry and back stairway with three entry points: front yard, rear yard, and garage. It features Dutch doors for the front and rear entries creating a natural breezeway when they are open. The walls are lined with painted, vertical tongue and groove for a finished, informal, but durable look. It is chock full of storage options, making this space stylish and functional for a young and busy family on the go.

CHAPPAQUA Prior to renovation, this home had a narrow and inefficient mudroom. Its two small closets did not provide enough storage for the growing family. A new addition to the garage allowed the team to expand the mudroom by 4 feet. This provided the space needed for adequate storage and a laundry room. The first of two areas includes a laundry, pantry, slop sink, cleaning supply storage, and a nook for the family dog's bowls. The second area is accessible by an exterior entrance, the laundry area, and the kitchen; it includes a combination of open and closed storage.
